

Results of the IEER Quarterly Business Climate Survey

January 2017

Summary in English

Budapest, February 2017

The Institute for Economic and Enterprise Research operated by the Hungarian Chamber of Commerce and Industry (IEER or GVI in Hungarian) is a non-profit economic research institute indulging in applied research in several subfields of economics. Our mission is to provide empirically and theoretically substantiated knowledge and analysis of the economic and social processes that influence the actual situation and perspectives of Hungarian economy and Hungarian companies.

1. Business Climate Index and Uncertainty Index

The results of the latest quarterly business climate survey reveal that the economic condition remains the same as that in the previous quarter: the IEER Quarterly Business Climate Index is 30.5 points, and it was 30.4 points in October 2016. The value of the indicator was 30.5 points in July 2016, that is, the last three quarters are characterized by the stagnation of the Business Climate Index. (The Business Climate Index was 31.7 points in the same period of the previous year.)

The Uncertainty Index is at a current level of 36 points, which is slightly higher than in the previous quarter (it was 35 points in October 2016). The value of the Uncertainty Index indicates that the current trend is not uniform within the private sector, and that it will continue to be confined to one part of the economy and will not be felt by all companies.

In sum, we can assess that the level of business climate is still favourable in January 2017, however, there were no improvement compared to October 2016, the value of the index stagnated.

Annex

The formula of the IEER Quarterly Business Climate Index (BCI)

$BCI = (raj_ + uhj_ + vjj_ + tszm_ + lvv_ + uhv_ + vjv_ + cue_ + tszv_ + bvv_) / 10$,
where:

- RAJ_: current stock orders
UHJ_: current business situation
VJJ_: current profitability
TSZM_: production levels – previous quarter
LVV_: expected change in staff members
UHV_: expected business situation
VJV_: expected profitability
CUE_: expected capacity utilization
TSZV_: expected production levels
BVV_: expected investment activity

The formula of the IEER Quarterly Uncertainty Index (UI)

UI = the variance of the BCI

The values of the indicators

The answers for the questions relating to the indicators worth the following scores:

Answer	Score
Good / Better / Growing / It will be better / It will grow	100
Satisfactory / Does not change / Will not change	0
Bad / Worse / Decreasing / It will be worse / It will decrease	-100
