

## **Results of the IEER SME Outlook Survey**

### **January 2014**

*Summary in English*

Budapest, January 2014

The Institute for Economic and Enterprise Research operated by the Hungarian Chamber of Commerce and Industry (IEER or GVI in Hungarian) is a non-profit economic research institute indulging in applied research in several subfields of economics. Our mission is to provide empirically and theoretically substantiated knowledge and analysis of the economic and social processes that influence the actual situation and perspectives of Hungarian economy and Hungarian companies.

## 1. SME Outlook Business Climate Index and Uncertainty Index

The results of the latest SME Outlook survey reveal more favourable expectations compared to the previous quarter: the SME Outlook Business Climate Index increased from 2 points to 9 points, surpassing the level of January 2013 (7 points). The value of the SME Outlook Uncertainty Index compared to the previous quarter is similar, it increased from 31 to 33 points. These values are notably lower than we found earlier in the course of the SME Outlook Business Climate Survey. This result implies that there is a decrease in the diversity of opinions on views toward the current and expected business situation of enterprises, however the perceptions of the trends are still not clear or uniform within the SMEs.

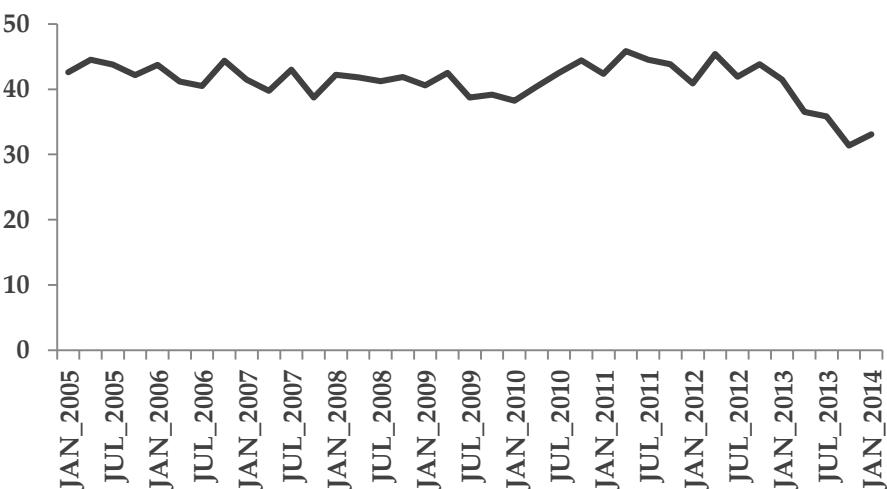

Regarding the indicators we can conclude that in the last quarter of 2013 the business confidence rebounded to a favourable (compared to the period since 2011) level measured in the second quarter of 2013, after a lurch in the third quarter of 2013.

## 2. The components of the SME Outlook Business Climate Index

The SME Outlook Business Climate Index consists of ten components. The figures below demonstrates the quarterly developments of them.

### 2.1. Quarterly developments of the business climate indicators

Source: IEER 2014

We can conclude that the more favourable rating of the current and expected business situation and profitability, the expected investment activity, the stock orders and future capacity utilization led to the increase of the SME Outlook Business Climate Index. In contrast the level of production decreased in the previous quarter and the referring expectations stagnated, and in addition, the enterprises became more pessimistic regarding the expected change in staff members.

## Annex

### The formula of the SME Outlook Business Climate Index (BCI)

$BCI = 0.18*raj\_ + 0.04*(uhj\_ + vjj\_ + tszm\_ + lvv\_ + uhv\_ ) + 0.18*vjv\_ + 0.10* cue\_ + 0.18*tszv\_ + 0.17* bvv\_$ , where:

- RAJ\_: current stock orders  
UHJ\_: current business situation  
VJJ\_: current profitability  
TSZM\_: production levels – previous quarter  
LVV\_: expected change in staff members  
UHV\_: expected business situation  
VJV\_: expected profitability  
CUE\_: expected capacity utilization  
TSZV\_: expected production levels  
BVV\_: expected investment activity

*The formula for calculating the SME Outlook Business Climate Index was changed in January 2014, so the index follows the growth rates of GDP more precisely.*

### The formula of the SME Outlook Quarterly Uncertainty Index (UI)

UI = the variance of the BCI

### The values of the indicators

The answers for the questions relating to the indicators worth the following scores:

Answer	Score
Good / Better / Growing / It will be better / It will grow	100
Satisfactory / Does not change / Will not change	0
Bad / Worse / Decreasing / It will be worse / It will decrease	-100
